Subject: more back story

Zachary,

I attached yesterday's climate change news article. I may be going out on a limb; my personal opinion it is absurd! After 30 years of status quo, says Calif needs to double down in the biomass energy arena: "twice as much, in half the time, with less money".

The upside; it gives ABF / GCN a platform window for proposing pragmatic paradigm change, such as the NFF related to biochar and forest and farm soils. The other attachments point out the general direction GCN is leading.

The business ally and anchor in our approach was Clive Whittenbury, passed away from cancer.

Sounds great, let me know how I can help. Do you have details on BMF? I will check with my supervisor about setting up a meeting next month and get back to you as soon as I can.

Zach

Subject: BMF chronology

Thanks Zachary,

The reason I stopped by yesterday was to make an appointment to discuss the attached documents. The biomass conversion issues are complicated and evolved into a paradox created by AB 32 Cap & trade. The bottom line is the proposed Biomass Mitigation Fund (BMF) should be part of the solution. GCN is requesting the BMF have a tax incentive associated with it. We need a conservative proactive farmer leader sponsor a bill addressing the economics disparity!

I recommend you and I spend time discussing our pragmatic agenda before we meet with Assemblyman Gallagher when he is in town next month.
